Sequence 1, Application Us/09856920

Patent No. 6740325

GENERAL INFORMATION:

APPLICANT: Yedd Research and Development Co.

PITLE OF INVENTION: Peptide-based vaccine for influenza

FILE REFERENCE: 9822 PCT

CURRENT APPLICATION NUMBER: Us/09/856,920

CURRENT FILING DATE: 2002-02-19

NUMBER OF SEQ ID NOS: 9

SOFTWARE: Patentin Ver. 2.1

SEQ ID NO 1

LENGTH: 18

Type: PAT

ORGANISM: Influenza virus

napin large chain L1A - Swedish turnip (fragments)
C;Species: Brassica napus var. rapifera (Swedish turnip, rutabaga)
C;Date: 19-Mar-1998 #sequence_revision 17-Apr-1998 #text_change 31-Dec-2004
C;Accession: $70340
R;Neumann, G.M.; Condron, R.; Thomas, I.; Polya, G.M.
Biochim. Biophys. Acta 1295, 34-43, 1996
A;Title: Purification and sequencing of multiple forms of Brassica napus seed napin larg
A;Reference number: $70340; MUID:96283791; PMID:8679671
A;Accession: $70340
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         his operon leader peptide [imported] - Escherichia coli (strain O157:H7, substrain C;Species: Escherichia coli C;Species: Escherichia coli C;Species: Escherichia coli C;Date: 16-Feb-2001 #sequence_revision 16-Feb-2001 #text_change 09-Jul-2004 C;Accession: A85827 C;Accession: A85827 R;Perna, N.T.; Plunkett III, G.; Burland, V.; Mau, B.; Glasner, J.D.; Rose, D.J.; N R;Perna, N.T.; Plunkett III, G.; Burland, V.; Mau, B.; Glasner, J.D.; Rose, D.J.; N R;Perna, N.T.; Plunkett III, G.; Burland, V.; Mau, B.; Glasner, J.D.; Rose, D.J.; N R;Perna, N.T.; Plunkett III, G.; Burland, V.; Mau, B.; Glasner, J.D.; Rose, D.J.; N R;Perna, N.T.; Plunkett III, G.; Burland, V.; Mau, B.; Glasner, J.D.; Rose, D.J.; N R;Perna, N.T.; Plunkett III, G.; Burland, V.; Mau, B.; Glasner, J.D.; Rose, D.J.; N R;Perna, N.T.; Plunkett III, G.; Burland, V.; Mau, B.; Glasner, J.D.; Rose, D.J.; N R;Perna, N.T.; Plunkett III, G.; Burland, V.; Mau, B.; Glasner, J.D.; Rose, D.J.; N R;Perna, N.T.; Plunkett III, G.; Burland, V.; Mau, B.; Glasner, J.D.; Rose, D.J.; N R;Perna, N.T.; Plunkett III, G.; Burland, V.; Mau, B.; Glasner, J.D.; Rose, D.J.; N R;Perna, N.T.; Plunkett III, G.; Burland, V.; Mau, B.; Glasner, J.D.; Rose, D.J.; N R;Perna, N.T.; Plunkett III, G.; Burland, V.; Mau, B.; Glasner, J.D.; Rose, D.J.; N R;Perna, N.T.; Plunkett III, G.; Burland, V.; Mau, B.; Glasner, J.D.; Rose, D.J.; N R;Perna, N

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Novel antibody that specifically binds to mammalian IgE epitope, useful for testing an allergen reactivity of IgE sample, detecting mammalian Igor treating asthma or anaphylactic shock. IgE

Example 6; Page 9; 14pp; English.

The present invention relates to a novel monoclonal antibody (I) that specifically binds to a mammalian IgE epitope, where the epitope is between amino acids 145-166 or 356-374 of mammalian IgE, e.g. dog IgE. (I) is useful for testing an allergen reactivity of an IgE sample. The allergen is chosen from mold, pollen, dust mite, milk, egg, soy, peanut and corn allergens. The sample is a biological sample collected from a dog, cat or horse. (I) is also useful for detecting mammalian IgE and for treating asthma or anaphylactic shock. The 5.91 and 3.76 monoclonal antibodies recognise epitopes on canine IgE corresponding to amino acid residues 357-371 (ADR10601) and 146-162 (ADR10609) respectively of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ព្រះព្រះជន្ល
The invention relates to an immunogenic composition comprising an CC isolated polypeptide having an amino acid sequence that is at least 80% CC identical to 6 (S1-S6), 15 amino acid sequence that is at least 80% CC identical to 6 (S1-S6), 15 amino acid peptide sequences derived from CC equine immunoglobulin E (the composition induces production of an CC antibody that specifically binds to equine immunoglobulin (Ig)E), the six CC polypeptides are not explicitly identified in the specification. Also CC included are a composition comprising an antibody that specifically binds to equine IgE made by the process of immunising an CC animal with a polypeptide at least 80% identical to (S1)-(S6), an antibody that specifically binds to equine IgE (involving immunising an CC animal with a composition further comprising an isolated polypeptide (the CC amino acid sequence of the polypeptide is at least 80% identical to (S1)-(S6), and collecting antiserum from the animal) and a kit for detection of equine IgE in a biological sample comprising the antibody and means CC for detecting specific binding of the antibody to equine IgE. The CC antibody is useful for detecting equine IgE protein in a biological sample (serum) which involves contacting the sample with the antibody, the antibody and antigen are inspected of the antipen/antibody complex. The antibody and antigen are immobilised on a solid surface. The antibody is labelled such that the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           canine IgE epsilon-chain. Recognition of epsilon-chains from IgE from cat, horse, pig and human by 5.91 and 3.76 was examined. Both 5.91 and 3.76 were observed to have good cross-reactivity with the epsilon-chain of IgE from cat and horse, but did not exhibit cross-reactivity with either pig or human epsilon-chains of IgE. The present sequence is the horse IgE 3.76 recognition site.

           This invention describes novel antibodies that immunospecifically bind to B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the tumour necrosis factor (TNF) super family and induces B cell proliferation and differentiation. The antibodies of the invention have cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antirheumatic and antiAIDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be administered to treat diseases associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and

The complex is detected using a second labelled antibody. The peptides are useful for generating antibodies specific for IgE which can serve as a diagnostic test for allergy. The present sequence is a Horse immunoglobulin E, IgE, heavy chain immunogenic peptide from the middle portion of the C2 region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ABP46438

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    S
                                                    This invention relates to novel antibodies that immunospecifically bind to B lymphocyte stimulator (BLyS). The BLyS gene has been mapped to CC chromosome 13q34 and encodes a protein that is a member of the tumour CC necrosis factor superfamily and induces both in vivo and in vitro B cell proliferation and differentiation. Specifically, it refers to single CC chain antibody molecules (scFvs) derived, preferably, from the variable heavy CDR3 region that immunospecifically bind to a polypeptide, or CC fragment thereof, of either human, murine, rat or monkey BLyS. The present invention refers to the use of such antibodies in various methods CC for the detection, diagnosis and prognosis of diseases related to the aberrant expression or inappropriate function of BLyS or its receptor. As such, these compositions are useful for identifying immune disorders including myasthenia gravis and multiple sclerosis, inflammatory CC disorders e.g. asthma and rheumatoid arthritis, infectious diseases such as ALDS and proliferative disorders including leukaemia, carcinoma and CC lymphoma, Arcordingly rhew can be described as activities of the content of the conte

The invention relates to a novel antibody that immunospecifically to a B Lymphocyte Stimulator protein. The protein comprises an and sequence that is 85% identical to the VH domain of any one of the chain variable fragments (gcFvs) of SEQ ID NOs. 1-2128, and/or an acid sequence that is at least 85% identical to the VL domain of a

The invention further comprises: an clisolated nucleic acid molecule encoding the antibody; an isolated cell cline that expresses the antibody; a method for detecting the expression comprises: an expression of a B Lymphocyte Stimulator protein; a method for diagnosing an expression of a B Lymphocyte Stimulator protein; and a method for treating, and eventing, or ameliorating an autoimmune disease or a B cell cancer; and a method for treating, and preventing, or ameliorating an autoimmune disease or a B cell cancer. The autoimmune disease is systemic complements of a single-treating, preventing, or ameliorating an autoimmune disease is systemic composing, treating, and preventing immune disorders (e.g. multiple collectosis, myasthenia gravis, or Hashimoto's disease), inflammatory complements; when a sequence represents the heavy chain variable fragment complementary determining region 3 of a single-chain variable fragment complementary determining region 3 of a single-chain variable fragment composition of the invention. Note: This sequence is not shown in the specification. It has been electronically downloaded from the USPTO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match
                                                    The invention relates to a method of preventing or treating celiac disease comprises administering to an individual at least one agent selected from a peptide comprising at least one epitope, given in the specification, or their equivalents, and an analogue of the peptide, which is capable of being recognized by a T cell receptor that recognizes the peptide. The methods, agents, antagonists and compositions are useful for treating or preventing celiac disease. The agent or antagonist, or wild type sequence is useful for producing an antibody specific to the agent, antagonist or wild type sequence. The mutation in an epitope of a gluten protein is useful for decreasing the ability of the gluten protein co cause celiac disease. The present sequence represents the amino acid sequence of a wheat gliadin/glutein epitope.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               which is capable of being recognized by a T cell receptor that recognizes the peptide. The agent or antagonist, or wild type sequence is useful for producing an antibody specific to the agent, antagonist or wild type sequence. The mutation in an epitope of a gluten protein is useful for decreasing the ability of the gluten protein to cause celiac disease. The present sequence represents the amino acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Preventing or treating celiac disease comprises administering to an individual a peptide (analogue) comprising at least one T cell epitope (e.g. a wheat and/or an oat epitope).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       gastrointestinal

                                                                                                                                              The present invention relates to a novel monoclonal antibody (I) that CC specifically binds to a mammalian IgE peritope, where the epitope is CC between amino acids 145-166 or 356-374 of mammalian IgE, e.g. dog IgE. CC (I) is useful for testing an allergen reactivity of an IgE sample. The cand corn allergens. The sample is a biological sample collected from a CC and corn allergens. The sample is a biological sample collected from a CC dog, cat or horse. (I) is also useful for detecting mammalian IgE and for CC treating asthma or anaphylactic shock. The 5.91 and 3.76 monoclonal CC antibodies recognise epitopes on canine IgE corresponding to amino acid CC residues 357-371 (ADR10601) and 146-162 (ADR10609) respectively of the CC canine IgE speilon-chain. Recognition of epsilon-chains from IgE from CC cat, horse, pig and human by 5.91 and 3.76 was examined. Both 5.91 and CC of IgE from cat and horse, but did not exhibit cross-reactivity with the cepsilon-chain epsilon-chains of IgE. The present sequence is the CC cat IgE 3.76 recognition site.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Best Local Similarity

25-MAR-2003
09-OCT-1994
                                                                                                                                                                                                                                                                                                                                                  The surface M protein of Group A streptococi is the major virulence factor and protective antigen of these organisms. However, there are a tremendous number of M protein serotypes. The invention provides recombinant M protein antigens comprising a gene encoding a carrier protein and an NH2 or COOH terminal M protein fragment carrying one or more epitopes. AAR50332 is a suitable NH2-terminal fragment of M3 protein for constructing antigens which elicit opsonic antibodies in an immunised animal when linked or fusied to an appropriate carrier.                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC invention has cytostatic and immunostimulant activity, and is useful as a CC vaccine. The 12192A3 proteins and polynucleotides are useful for cellular immune response. The polynucleotides are useful for creating humoral or cellular immune response. The polynucleotides are CC useful for characterising cytogenetic abnormalities of this chromosomal clocus, as tools that can be used to delineate cytogenetic abnormalities in the chromosomal region that encodes 12192A3 that may contribute to complete the chromosomal region that encodes 12192A3 that may contribute to complete the status of 12192A3 gene products in normal versus cancerous tissues. The proteins are useful for complete the concervating and characterising domain-specific antibodies, for identifying agents or cellular factors that bind to 12192A3 or a particular structure commain, and in various therapeutic and diagnostic contexts, including cancer vaccines. The antibodies or T cells reactive with the product are useful in passive or active immunisation, and in imaging methodologies for the management of cancer. The sequences shown in ABP83646 - ABP95595 crepresent peptides from the 12192A3 variants of the invention
                                                                                                                                                                                                                                                                                                                                                                                                         Best Loc

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a novel composition comprising a substance that CC modulates the status of a protein, 12122A. The composition of the CC modulates the status of a protein, 12122A. The composition of the CC invention has cytostatic and immunostimulant activity, and is useful as a CC vaccine. The 12122A3 proteins and polynucleotides are useful for characterising cytogenetic abnormalities of this chromosomal can be used to delineate cytogenetic abnormalities of this chromosomal can be used to delineate cytogenetic abnormalities in the chromosomal region that encodes 12122A3 that may contribute to malignant phenotype, and in assessing the status of 12122A3 gene products in normal versus cancerous tissues. The proteins are useful for generating and characterising domain-specific antibodies, for identifying agents or cellular factors that bind to 12122A3 or a particular structure context or contexts, including cancer vaccines. The antibodies or T cells reactive with the product are useful in passive or active immunisation, and in imaging methodologies for the management of cancer. The sequences shown in ABB33646 - ABB95595
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a novel composition comprising a substance that CC modulates the status of a protein, 1212A3. The composition of the CC invention has cytostatic and immunostimulant activity, and is useful as a CC vaccine. The 1212A3 proteins and polynucleotides are useful for claiming humoral or cellular immune response. The polynucleotides are useful for characterising cytogenetic abnormalities of this chromosomal cc useful for characterising cytogenetic abnormalities of the chromosomal region that encodes 121P2A3 that may contribute to complete the chromosomal region that encodes 121P2A3 that may contribute to complete the chromosomal versus cancerous tissues. The proteins are useful for generating and characterising domain-specific antibodies, for identifying CC agents or cellular factors that bind to 121P2A3 or a particular structure conservacines. The antibodies or T cells reactive with the product are useful in passive or active immunisation, and in maging methodologies for the management of cancer. The sequences shown in ABB83646 - ABB95595 or represent peptides from the 121P2A3 variants of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to peptide antagonists of tissue Factor VIIa (tFVIIa) and a method of inhibiting FVIIa activity by contacting FVIIa with the peptide in the presence of tissue factor and under conditions that allow binding of the compound to FVIIa to occur. The peptides are useful for preventing or treating chronic thromboembolic diseases or disorders associated with fibrin formation including vascular disorders, such as deep venous thrombosis, arterial thrombosis, stroke, atherosclerosis, or septicaemia. The present sequence represents a tFVIIa peptide antagonist of the invention.
The present invention relates to a novel monoclonal antibody (I) that specifically binds to a mammalian IgE epitope, where the epitope is between amino acids 145-166 or 356-374 of mammalian IgE, e.g. dog IgE (I) is useful for testing an allergen reactivity of an IgE sample. The allergen is chosen from mold, pollen, dust mite, milk, egg, soy, peanut and corn allergens. The sample is a biological sample collected from a
                                                                                                                                                                                                                                                                                Novel antibody that specifically binds to for testing an allergen reactivity of IgE or treating asthma or anaphylactic shock.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New peptide, useful for preventing or treating chronic thromboembolic diseases or disorders associated with fibrin formation including vascular disorders, such as deep venous thrombosis, arterial thrombosis, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 17 AA;

                                                      The present invention describes an isolated DNA (I) comprising a nucleotide sequence coding for an enzyme having enone reductase activity. Also described: (I) a vector or a plasmid comprising (I); (2) a host cell transformed or transfected by (I) or the vector or the plasmid of (I); (3) a polypeptide encoded by (I) and (4) a process for the production of levodione which comprises contacting ketoisophorone with the polypeptide of (3) or with the host cell of (2) or a cell-free extract under conditions for the production of levodione, e.g. at pH 4.0-9.0 and at a temperature of 10-60 degrees Celsius for 5 minutes to 72 hours or at pH 5.0-8.0 and at a temperature of 20-60 degrees Celsius for 15 minutes to 48 hours. The DNA (I) and the encoded polypeptide can be used in improving the production process of condition, which is important in the synthesis of optically active carotemoids. The present sequence represents a Candida kefyr (Kluyyeromyces marxianus) enone reductase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               dog, cat or horse. (I) is also useful for detecting mammalian IgE and for treating asthma or anaphylactic shock. The 5.91 and 3.76 monoclonal antibodies recognise epitopes on canine IgE corresponding to amino acid residues 357-371 (ADR10601) and 146-162 (ADR10609) respectively of the canine IgE epsilon-chain. Recognition of epsilon-chains from IgE from cat, horse, pig and human by 5.91 and 3.76 were observed to have good cross-reactivity with the epsilon-chain of IgE from cat and horse, but did not exhibit cross-reactivity with either pig or human epsilon-chains of IgE.
                                                                                                                                                                                                                                                                                                                                                                                                                            New enone reductase, useful in improving the production process of levodione, which is important in the synthesis of optically active
    Sequence 10 AA;
